Features & Benefits

Where Style Meets Versatility
in Every Frame

Rustique presents itself as a fully versatile and seamlessly integrated 70mm system, boasting an attractive curb appeal and distinguished by its sculpted form and sleek sightlines.

One of its noteworthy advantages lies in its complete compatibility with our System10 70mm bevelled suite of profiles, affording you the flexibility to

effortlessly blend and complement both systems.

You'll find a selection of well-matched single-leg beading options that are not only swift and secure but also a breeze to install on-site, along with other innovative features carefully crafted to streamline installation processes. In essence, Rustique is meticulously

engineered for optimal performance.

Whether you serve the trade, retail, commercial sectors, or the new construction industry, Rustique offers an extensive array of window and door styles to cater for the needs of consumers and clients alike.

Product Features

70mm Profile

Profile measures 70mm front to back, to ensure a direct replacement with timber windows, with minimal trimming or finishing.

Fully interchangeable

Seamlessly integrates with the System10 70mm bevelled systems, allowing for the utilisation of the same ancillaries and hardware.

All-in-one system's versatility

The all-in-one system's versatility offers a wide array of window and door styles to cater to your market.

Bead and glazing options

Designed to accept 24mm, 28mm, 32mm, 36mm* and 40mm* sealed units. The profiles can be fitted with a choice of beads with bevelled or sculptured shape designs.

Thermal efficiency

The windows have been meticulously crafted to attain an exceptional WER A+ rating when equipped with a double glazed unit and a standard outer frame. By incorporating our thermal inserts, you can enhance the WER performance even further. Furthermore, the system can achieve impressive U-values of 1.2 when employing the thermal insert with double glazing.

Product applications

The Rustique collection provides the capability to craft a variety of window styles, including Casement, Tilt & Turn and FlushSash, as well as Residential and French doors. Rustique also offers a selection of slim sashes to enhance glazing and reduce the prominence of the frame.

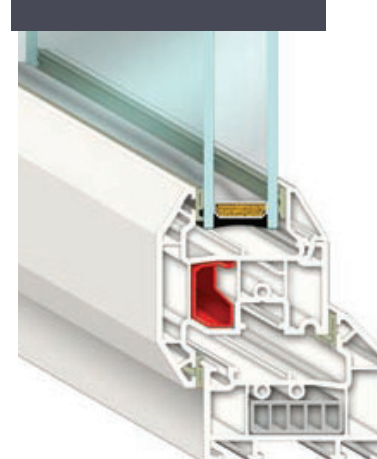

Material specification

All Rustique profiles are manufactured from acrylic high impact modified, Polyvinyl Chloride unplasticised compound (PVC-u).

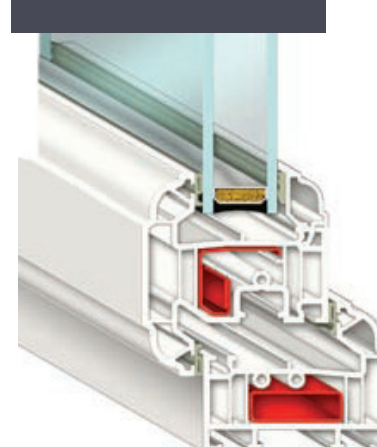

Performance & Accreditation

Rustique products have undergone rigorous independent assessments and proudly earned accreditations from the British Standards Institute. They have successfully met the stringent criteria of BS6375 for weather performance, PAS 24:2022 for security, and BSEN12608. These accreditations reflect our commitment to quality and excellence.

Sculptured Profile

Product Specifications

1 Reinforcement chamber

The additional chamber allows us to employ galvanized steel reinforcement, enhancing both strength and rigidity. Our distinctive reinforcement design ensures optimal durability while maintaining exceptional thermal efficiency.

2 Single leg bead for quick and easy glazing

Our single-leg beading features an effortless 'knock-in' design, ensuring it's installer-friendly and greatly streamlines the on-site glazing process, making it quicker, easier, and more secure.

3 PCE gasket

Our low-level gasket offers enhanced efficiency in both fabrication and installation. Its heat-bonded construction eliminates concerns of shrinkage and the potential for incorrect gasket fittings. This result is a consistent level of quality and finish, mitigating any stretching issues and optimising compression. Additionally, our gasket's unique channel design reduces the likelihood of hard lumps forming in corners and allows for convenient gasket replacement in case of damage. Notably, it incorporates a newly designed weather seal flipper and a glazing pad to enhance sealing performance.

4 Drainage

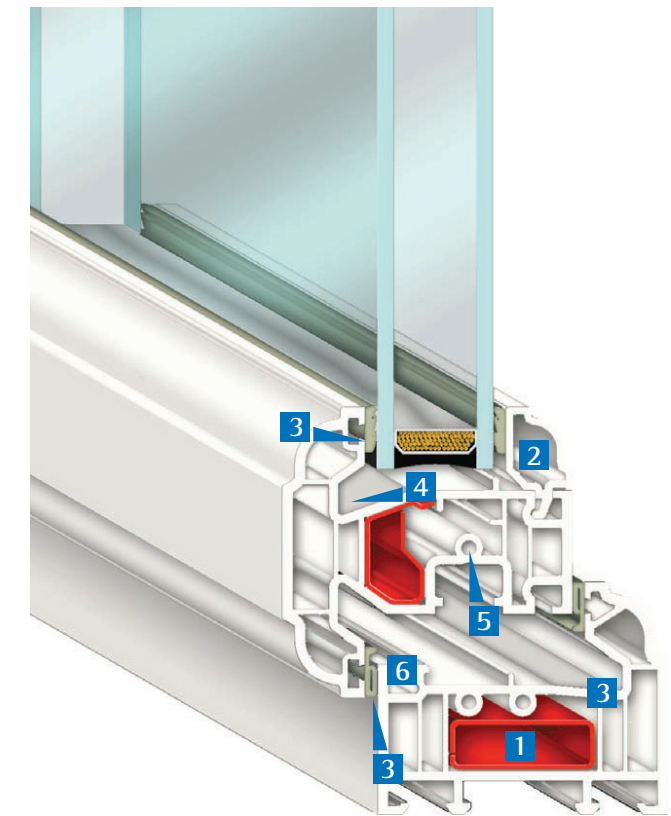

A wider channel allows for quick drainage of any water and reduced risk of residue build up for an improved performance.

5 Top hat fixings & screw ports

The hardware and striker keeps are securely fastened to the top hat fixing points and screw ports, resulting in enhanced technical performance and superior security.

6 10mm overlap

A 10mm overlap as standard gives an increased weather performance.
